Summary

UCSD Math-CS student who builds **full-stack** web apps with **React** and **TypeScript** on Python backends, including an AI chatbot that turns requests into UI. Keeps code quality high through unit tests and code reviews with teammates.

Education

University of California San Diego — La Jolla, CA

B.S. in Mathematics-Computer Science, Minor in Cognitive Science, GPA: 3.84 — *Expected June 2028*

- Coursework: Data Structures & Algorithms (C++), Object-Oriented Programming, Systems Programming (C), Machine Learning

Experience

Software Engineer Intern (AI Automation) — September 2026 – Present

Allied Legacy Partners — *San Diego, CA*

- Built **full-stack dashboards** and Python LLM workflows that turn transcripts into action items, automating follow-ups
- Integrated automations with outside apps via **REST APIs**, replacing tasks the team did by hand every week
- Developing a backend service that turns incoming emails into **structured JSON**, so internal tools can search them
- Scoped tools with the coworkers who use them, turning manual processes into automations that save **hours each week**

Full Stack Software Developer (Part-time) — June 2025 – September 2026

UCSD Foundation Interface Lab (Prof. Haijun Xia) — *San Diego, CA*

- Developed a **TypeScript** AI chatbot for the lab's Meridian app, letting users generate UI from a plain request
- Packaged the chatbot as an **npm component** with modular interfaces, speeding up integration into other projects
- Wrote **unit tests** for the app's data binding and UI generation, catching bugs before features reached users
- Applied **design patterns** and reviewed code through Git with researchers, keeping the package clean and maintainable

Software Developer Intern (Part-time) — January 2026 – May 2026

Sanford Burnham Prebys — *San Diego, CA*

- Rewrote a **Python** neural-signal pipeline with better data structures, making analysis **2× faster**
- Created **Next.js** full-stack apps so researchers with no coding experience could enter data and read results
- Analyzed and visualized large neural datasets with Pandas and NumPy, giving researchers results they could act on
- Translated technical work for non-technical researchers and prioritized the fixes that mattered most to them

Instructional Assistant, DSC 10 (Principles of Data Science) — September 2026 – Present

UC San Diego, Halıcıoğlu Data Science Institute — *La Jolla, CA*

- Coach students one on one through debugging their Python data analysis code, and grade assignments
- Contributed to the course's grade report tool, which pulls scores from several sources so students can track grades
- Lead a DSC 10 study group, breaking probability and data science ideas into simple steps

Founder, Programming Instructor & Web Developer — January 2022 – June 2025

NGYL (STEM Education Nonprofit) — *Jericho, NY*

- Taught Python to **300+ students** and built the nonprofit's website, which **doubled** volunteer sign-ups

Technical Projects

No Code EDA | *TypeScript, React, Next.js, Python, FastAPI, SQL, Docker, REST APIs*

- Created a **full-stack** app that turns plain-English questions into SQL and Python, so non-coders can explore data
- Built a FastAPI **REST API** backend served to a **React** frontend, turning user requests into queries on their data
- Tested Meridian's data binding on real datasets by generating a custom analysis UI for each user request
- Containerized the app with **Docker** and validated each query, so bad input shows an error instead of crashing

Poker Bot | *Python, Algorithms, Game Theory*

- Building an offline poker bot that makes game-theory-optimal decisions in **under 1 ms** within a 100 MB limit
- Optimized the bot with fast lookup tables and seeded strategies so every run is reproducible
- Verified the bot's decisions with unit tests against answers that can be computed exactly

Wash Shuffle Modeling (w/ Prof. Peter Chi) | *Python, OpenCV, NumPy, Machine Learning*

- Engineered a computer vision tool that recognizes each card on camera, replacing manual data entry
- Stored **600+** recorded shuffles in a data pipeline to feed statistical models of the wash shuffle

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, HTML/CSS, SQL, C++, C
Frameworks & Libraries: React, Node.js, Next.js, FastAPI, Pandas, NumPy
Tools & Practices: REST APIs, Git, GitHub, Code Review, Unit Testing, Design Patterns, OOP, Docker, AWS, LLM APIs, Debugging, Agile/Scrum
