EDUCATION

University of California San Diego, La Jolla, CA

June 2028

GPA: 3.9 | B.S in Mathematics Computer Science, Minor in Data Science & Cognitive Science

WORK EXPERIENCE

Software Engineer Intern

June 2026 — Present

Unicircle

San Diego, CA

- Developed full-stack recruitment management features in **Next.js**, implementing applicant tracking, interview scheduling, and recruitment workflows used by student organizations across the platform.
- Engineered candidate filtering and search systems using optimized database queries and dynamic UI components, reducing recruiter review time and improving applicant discovery efficiency.
- Collaborated with a cross-functional team using **Git**-based development workflows, contributing production-ready features that improved platform scalability and recruitment operations.

Software Developer Intern

November 2025 — Present

UCSD Design Lab

San Diego, CA

- Packaged an AI-assisted chatbot component for the **Meridian npm package**, reducing integration time to under 3 minutes by replacing manual chatbot setup with a single component call.
- Developed prompt-engineering pipelines and Python tooling that enabled users to generate customized UI components from natural-language prompts, allowing users to have the right tools at the right time.
- Built a full-stack **React/Next.js** demonstration platform showcasing Meridian's data-binding and AI-driven UI generation capabilities, enabling rapid testing of real-world use cases.

Data Analyst Intern

January 2026 — May 2026

Sanford Burnham Prebys

San Diego, CA

- Enhanced an existing Python analysis pipeline by integrating automated data visualization modules, generating graphical representations of neural signals for downstream research analysis.
- Processed gigabytes of electrophysiological data through MEAnap, oscillation analysis, and spike-sorting workflows to identify neural activity patterns across experiments.
- Developed a **Next.js** data-processing application that transformed raw experimental outputs into Prism-compatible datasets, reducing data preparation time by approximately **50%**.
- Generated and analyzed **two-way ANOVA** visualizations in **GraphPad Prism**, supporting statistical evaluation of neural signal experiments.

Programming Instructor & Event Coordinator

January 2022 — June 2025

NGYL

Jericho, NY

- Designed and developed the organization's website using **HTML, CSS, and JavaScript**, doubling volunteer registrations and providing a centralized platform for events and communication.
- Organized a STEM career seminar featuring 4 industry professionals and attracting **200+ attendees**, increasing student exposure to technology careers.
- Instructed **300+ students** in Python programming, robotics, drone technology, and machine learning through hands-on courses

TECHNICAL PROJECTS

DeckScan | Computer Vision, Next.js, Python, CSV Manipulation

- Developed a computer vision application to automatically scan and reconstruct poker card orderings, increasing data collection **efficiency by 3x**.
- Processed and analyzed **600+** wash shuffle trials using DeckScan, generating large-scale datasets for **probabilistic modeling** and **statistical analysis**.

SKILLS

Languages: Python, Java, JavaScript, SQL, HTML/CSS, R, C

Frameworks: React, Next.js, FastAPI, TailwindCSS, OpenAPI, Node.js

Libraries: Pandas, NumPy, Matplotlib, Seaborn, OpenCV, Git, Prism
